**Shinko** SHINKO TECHNOS CO., LTD. Head office: 2-5-1, Senbahigashi, Minoo, Osaka, 562-0035, Japan TEL: +81-72-727-6100 FAX: +81-72-727-7006 URL: http://www.shinko-technos.co.jp/e/ E-mail: overseas@shinko-technos.co.jp For detailed usage, refer to the Instruction Manual for the DCL-33A. Please download the full Instruction Manual from Shinko website.

http://shinko-technos.co.jp/e/ -> Support & Downloads -> Downloads -> Manuals

Thank you for purchasing our DCL-33A, DIN Rail Mounted Indicating Controller. This manual contains instructions for the mounting, functions, operations and notes when operating the DCL-33A. To ensure safe and correct use, thoroughly read and understand this manual before using this instrument. To prevent accidents arising from the misuse of this instrument, please ensure the operator receives this manual.

## Safety Precautions (Be sure to read these precautions before using our products.)

- The safety precautions are classified into 2 categories: "Warning" and "Caution".
- carried out properly. A Caution: Procedures which may lead to dangerous conditions and cause superficial to medium injury or physical damage or may degrade or damage the product, if not carried out properly.

# ✓ Warning

• To prevent electric shock or fire, only Shinko or other qualified service personnel may handle the inner assembly.

• To prevent electric shock, fire or damage to the instrument, parts replacement may only be undertaken by Shinko or other qualified service personnel.

# SAFETY PRECAUTIONS

• To ensure safe and correct use, thoroughly read and understand this manual before using this instrument This instrument is intended to be used for industrial machinery, machine tools and measuring equipment. Verify correct usage after purpose-of-use consultation with our agency or main office. (Never use this instrument for medical purposes with which human lives are involved.)

External protection devices such as protective equipment against excessive temperature rise, etc. must be installed, as malfunction of this product could result in serious damage to the system or injury to personnel. Proper periodic maintenance is also required.

This instrument must be used under the conditions and environment described in this manual. Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring due to the instrument being used under conditions not otherwise stated in this manual.

## Specifications

Power supply voltage	100 to 240 V AC 50/60 Hz, Allowable voltage fluctuation: 85 to 264 V AC 24 V AC/DC 50/60 Hz, Allowable voltage fluctuation: 20 to 28 V AC/DC			
Basic accuracy (at ambient temperature 23°C, for a single unit mounting)	Thermocouple input: Within $\pm 0.2\%$ of each input span $\pm 1$ digit, or 2°C (4°F), whichever is greater However, R, S inputs, 0 to 200°C (0 to 400°F): Within $\pm 6°$ C (12°F) B input, 0 to 300°C (0 to 600°F): Accuracy is not guaranteed. K, J, E, T, N inputs, Less than 0°C (32°F): Within $\pm 0.4\%$ of input span $\pm 1$ digit, or 4°C (8°F), whichever is greater RTD input: Within $\pm 0.1\%$ of each input span $\pm 1$ digit or $\pm 1°$ C (2°F), whichever is greater DC voltage input: Within $\pm 0.2\%$ of each input span $\pm 1$ digit Direct current input: Within $\pm 0.2\%$ of each input span $\pm 1$ digit			
Input sampling period	g 125 ms			
Power consumption 100 to 240 V AC: Approx. 5 VA max. 24 V AC: Approx. 4 VA max. 24 V DC: Approx. 4 W max.				
Ambient Temperature, Humidity	0 to 50°C, perature, 35 to 85 % RH (Non-condensing)			
Weight	Approx. 100 g			
Accessories	Instruction manual excerpt: 1 copy When W option is ordered: Connector harness 3 m 1 length When W option (5A, 10A, 20A) is ordered: CT (CTL-6S) 1 piece When W option (50A) is ordered: CT (CTL-12-S36-10L1U) 1 piece When EI option is ordered: Connector harness AOJ 3 m 1 length When EA option is ordered: Connector harness AOJ 3 m 1 length			
	Relay contact 1a, Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load $\cos\phi$ =0.4) Electrical life: 100,000 cycles			
Control output (OUT1)	Non-contact voltage (for SSR drive): 12 V DC±15% Max 40 mA (short circuit protected) Direct current: 4 to 20 mA DC, Load resistance: Max 550 Ω Output accuracy: Within ±0.3% of output span Resolution: 12000			

# /!\ Caution for Installation

This instrument is intended to be used under the following environmental conditions (IEC61010-1)]: Overvoltage category  ${
m I\!I}$ Pollution dearee 2

Ensure the mounting location corresponds to the following conditions:

• A minimum of dust, and an absence of corrosive gases No flammable, explosive gases

- No mechanical vibrations or shocks
- No exposure to direct sunlight, an ambient temperature of 0 to  $50^{\circ}$ C (32 to 122°F) that does not change rapidly, and no icing.
- An ambient non-condensing humidity of 35 to 85 %RH

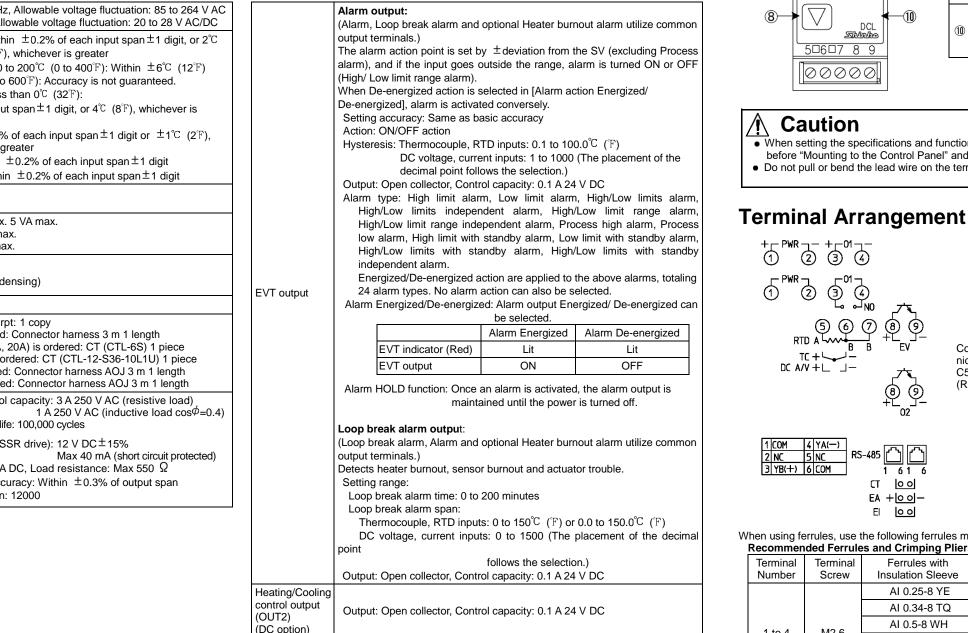

No large capacity electromagnetic switches or cables through which large current is flowing

No water, oil or chemicals or where the vapors of these substances can come into direct contact with the unit

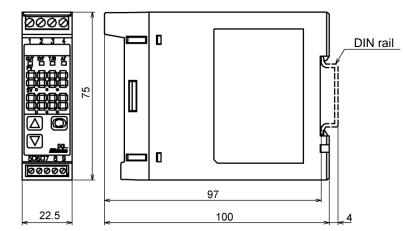

Take note that the ambient temperature of this unit – not the ambient temperature of the control panel – must not exceed  $50^{\circ}C$  (122°F) if mounted through the face of a control panel, otherwise the life of electronic components (especially electrolytic capacitors) may be shortened.

### Caution with respect to Export Trade Control Ordinance

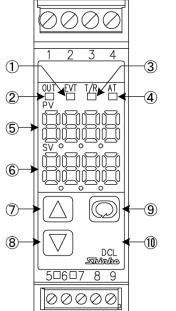

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported.

# External Dimensions (Scale: mm)

# Name and Functions

#### A Caution

• When setting the specifications and functions of this unit, connect mains power cable to terminals 1 and 2 first, then set them referring to "Key Operation Flowchart", before "Mounting to the Control Panel" and "Wiring" • Do not pull or bend the lead wire on the terminal side when wiring or after wiring, as it could cause malfunction

No.	Name	Description			
1	EVT indicator	The red LED turns on when Event output (Alarm, Loop break alarm or optional Heater burnout alarm) is ON. The red LED also turns on when Cooling output is ON if Heating/Cooling control option is ordered.			
2	OUT indicator	The green LED turns on when OUT (control output) is ON (when Heating output is ON if Heating/Cooling control option is ordered). For Direct current output, flashes in 125 ms cycles corresponding to the output MV.			
3	T/R indicator	The yellow LED flashes during Serial communication TX output (transmitting).			
4	AT indicator	The yellow LED flashes while auto-tuning (AT) is performing.			
5	PV Display	Indicates the PV (process variable), or setting characters in setting mode with a red LED.			
6	SV Display	Indicates the SV (desired value), output MV (manipulated variable) or each set value in each setting mode with a green LED.			
$\overline{O}$	UP key	Increases the numeric value.			
8	DOWN key	Decreases the numeric value.			
9	MODE key         Switches the setting mode or registers the set data. (Registers the set data by pressing the MODE Key.)				
10	SUB-MODE key	Enters Auxiliary function setting mode 2 in combination with the MODE key. If Control output OFF is selected in [SUB-MODE key function]: Turns all outputs OFF as if the power were turned OFF. If Auto/Manual control is selected in [SUB-MODE key function]: Switches the Auto/Manual control. If Alarm HOLD cancel is selected in [SUB-MODE key function]: Cancels Alarm HOLD.

## Basic Operation Procedure

0

sv IIII

PV cā4L Communication

sv nonL protocol

Reverts to the PV/SV Display.

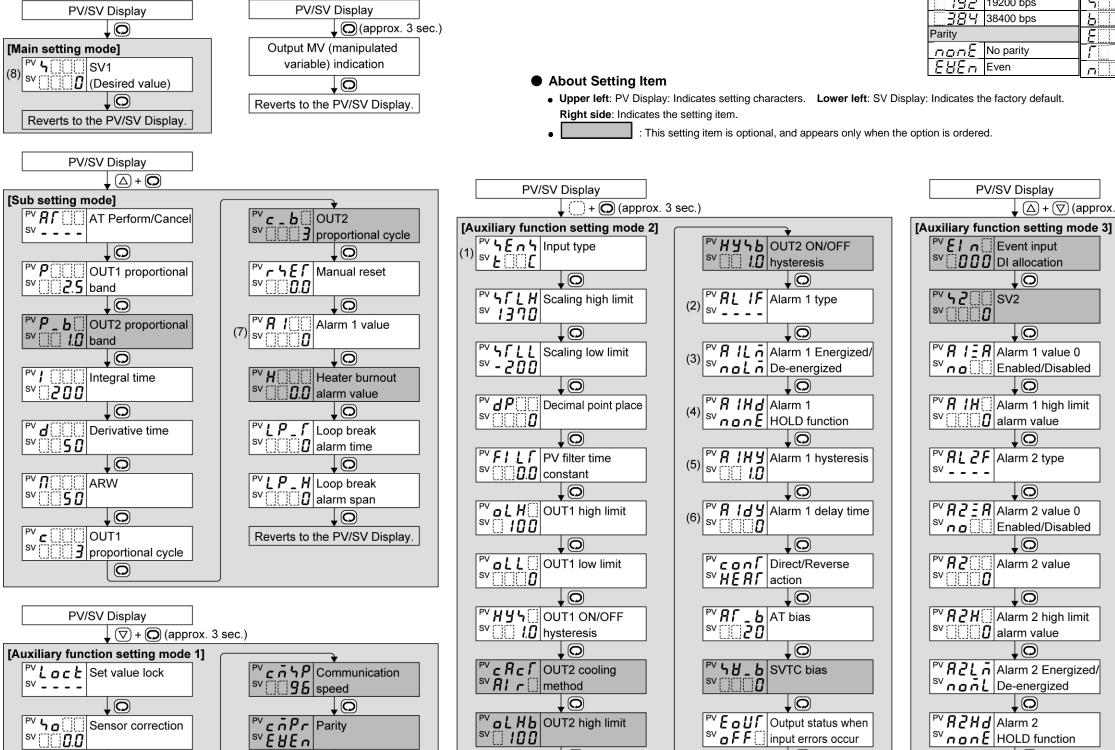

PV c n 4 / Stop bit

Set the input type, Alarm 1 type and SV1 (desired value), following the procedure below.

Setting item numbers (1), (2), (3), (4), (5), (6), (7) and (8) are indicated on the flowchart.			
[Step 1]	Turn the load circuit power OFF, and turn the power to the		
Operation before RUN	DCL-33A ON.		
<b>[Step 2]</b> Auxiliary function setting mode 2	<ul> <li>Select an input type and Alarm 1 type, etc. in Auxiliary function setting mode 2.</li> <li>(1) Select an input type in [Input type].</li> <li>(2) Select the Alarm 1 type in [Alarm 1 type].</li> <li>If any Alarm 1 type except () is selected, (3) to (6) will be indicated. Set them if necessary.</li> <li>Note: If Alarm 1 type is changed, the Alarm 1 value will default to 0 (0.0). Therefore, set the alarm value again.</li> <li>(3) Select Alarm 1 Energized/De-energized in [Alarm 1 Energized/De-energized].</li> <li>(4) Select either Alarm 1 Holding or Not holding in [Alarm 1 HOLD function].</li> <li>(5) Set the Alarm 1 hysteresis in [Alarm 1 hysteresis].</li> <li>(6) Set the Alarm 1 delay time in [Alarm 1 delay time].</li> </ul>		
[Step 3] Sub setting mode	(7) Set the Alarm 1 value in [Alarm 1 value].		
[Step 4] Main setting mode	(8) Set the SV1 (desired value) in [SV1 (desired value)].		
[Step 5] RUN	Turn the load circuit power ON. Control action starts so as to keep the control target at the SV1 (desired value).		

High limit alarm	The alarm action is $\pm$ deviation setting from the SV. The alarm is activated if the input value reaches the high limit set value.		
Low limit alarm	The alarm action is $\pm$ deviation setting from the SV. The alarm is activated if the input value goes under the low limit set value.		
High/Low limits alarm	Combines High limit and Low limit alarm actions. When input value reaches the high limit set value or goes under the low limit set value, the alarm is activated.		
High/Low limit range When input value is between the high limit and low limit set values, the alarm is activated.			
Process alarm	Within the scale range of the controller, alarm action points can be set at random and if the input reaches the randomly set action point, the alarm is activated.		
High limit alarm with standby Low limit alarm with standby High/Low limits alarm with standby	After the power supply to the instrument is turned on, even if the input enters the alarm action range, the alarm is not activated. If SV is changed while the controller is running, the alarm is not activated even if the input is in the alarm action range. (If the controller is allowed to keep running, the standby function will be released once the input exceeds the alarm action point.)
