Bite Type Tube Fittings (JIS B2351)

The best partner for value creation
We support the innovations of customers

▲ General Information For Our Bite Type Tube Fittings.

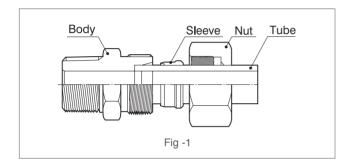

HANSUN bite type tube fittings are precision-machined, under strict quality control. HANSUN bite type tube fittings are the flareless tube fitting with the visible bite. This added safety feature makes them the preferred fitting for non-flared tube connections.

★ How Do They Work?

The bite type flareless hydraulic tube fitting is designed to work on medium to heavy wall tubing that is hard to flare.

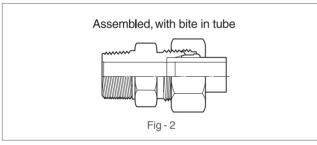

It consists of three parts:

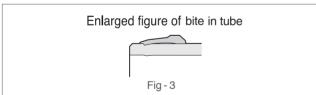

1. body, 2. sleeve, 3. nut. (As shown in Fig-1)

The sleeve is driven forward on the tube by the nut.

As the sleeve moves forward it meets the seal seat angle of the body which causes the sleeve to cam inward into the tube. The sleeve then bites into the tube causing a small ridge of tube material to be pushed up in front of the biting edge of the sleeve.(As shown in Fig-2&3)

The make-up of the fitting is critical in that the tube must be bottomed against the tube stop in the body or presetting tool during make up. If it is not bottomed the tube will move forward with the sleeve and a bite will not be achieved make sure the tube is bottomed.

A check is possible to see if the tube is bottomed during make up, To make this check inspect the end of the tube and see if a circular appearing ring has been impressed into the tube end face.

This impression may be caused by the tube stop which has a slight reverse angle rather than a flat face.

A Material Specfications

	•		
Parts	Steel	Stainless Steel	Brass
Forged body	S20C-S48C	SUS316 or A182 F316	C3771
Bar Stock Body	S20C-S48C	SUS316 or A276/A479 S316	C3604
Cold Formed Nut	S10C-S20C or JIS G3507		
Bar Stock Nut	S20C-S48C	SUS316-SUS304 or A276/A479 S316/S304	C3604
Sleeve	S10C	SUS316-SUS304 or A276/A479 S316/S304	C3604

▲ Gasket and O-ring Temperature Ratings

Component	Material	Temperature Ratings
O-ring	NBR(Buna N)	-31°F to 230°F of (-35°C to 110°C)
O-IIIIg	FKM (Viton®)	-20°F to 400°F (-28°C to 204°C)
SGC	Copper	-325°F to 400°F (-198°C to 204°C)
SGB	NBR(Buna N)	-13°F to 230°F of (-25°C to 110°C)
SGB	FKM (Viton®)	5°F to 400°F (-15°C to 204°C)
Thread sea	lant teflon tape	-320°F to 450°F (-196°C to 232°C)

▲ Applicable Pressure Rating

Our standard specifications of the fittings are as follows

Fitting Size (applicable Tube O.D)	4~15	16~22	25~28	30~38	40~45
Rated pressure (kgf/cm²)	500	400	350	250	210
Max.working temperature (°C)			300		

The Rated Pressure for the fittings are determined based on the results of the design specification confirmed by severe repetitive tests; the rated pressures are determined for each size of fittings while the safety factor of as much as 4 is taken into account in the design.

Common materal of tubing includes:

Steel - Seamless, fully annealed, also welded and redrawn type suitable for bending. Maximum hardness, Rockwell B72.

Stainless Steel - Seamless, fully annealed, also welded redrawn, fully annealed suitable for bending. Maximum hardness, Rockwell B90.

Copper - Seamless coils, soft or light annealed, Maximum hardness Rockwell F55. Straight lengths. light drawn and general purpose. Maximum hardness of 60 on Rockwell 30T scale.

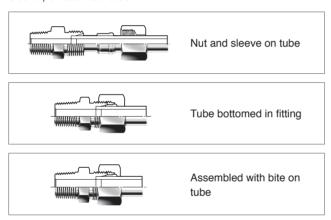

A Assembly Instructions

Cutting The Tube

Cut tube squarely and de-burr lightly the end both internally and externally.

Sleeve Placement

Slip nut and sleeve onto tubing. Be sure the long straight end of the sleeve points toward tube end.

Lubrication

Lightly lubricate threads on tool or body as well as the tail and lead end of the sleeve with extreme friction lubricant.

Pre-Setting

Insert tube end into tool or fitting until it sits on the shoulder(to hold tube motionless during pre-setting) and screw the nut down with finger tight.

Final Setting

Wrench nut down 1-1/2 turns to pre-set the sleeve (Reliable makeup of all flareless tube fittings is dependent upon the sleeve traveling a prescribed distance into tapered fitting throat in order to bite into the tube and effect a positive grip and seal.

♣ Reassemble For Final Installation

Insert the tube into the fitting body and wrench the nut down until a sudden increase in torque occurs. From this point turn the nut an additional 1/4 to 1/3 turn(1-1/2 to 2 wrench flats) to again spring the sleeve into place to seal against the tubing and the fitting body.

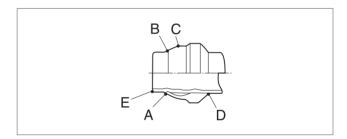

▲ Inspection Of Bite

All HANSUN bite type tube fittings must be disassembled and inspected for proper make-up before final assembley.

Detailed inspection procedures are outlined below and must be followed regardless of the method used to pre-set the sleeve to the tube

★ You Should Make Certain That

- A ridge of metal has been raised above the tube surfaces, to a height of at least 50% of the thickness of the sleeve leading edge, completely around the tube(A)
- 2. While the leading edge of the sleeve may be coined flat(B) there is a slight bow to the balance of the pilot section(C)
- **3.** The tail or back end of the sleeve is snugged against the tube(D)
- 4. There is a slight indentation all around the end of the tube(E) that indicates the tube was bottomed in the tool or fitting during pre-setting (unless evidence of this complete contact is visible the sleeve cannot be considered properly pre-set).
- 5. Avoid rotating the sleeve. Steel sleeve should not be capable of moving back and forth along tube, beyond the bite area(stainless steel sleeve will move more than steel because of its spring back characteristics).

★ Trouble Shooting

Problems with bite type hydraulic fittings are most often traced to faulty make-up procedures. Look for the following:

1. Tube not bottomed

Check for the indentation on the tube end or compare length from end of tube to the front end of the sleeve with that of a known good assembly.

2. Lack of bite

inspect for turned up ridge of material. A failure to achieve this ridge can be traced either to the fact that the nut was not tightened enough or that the tube was not bottomed against the stop which allowed the tube to travel forward with the sleeve.

3. Sleeve cocked on tube

The sleeve is cocked on the tube when the tube assembly is off axis with that of the body. Generally this condition is caused by faulty tube bending. All bent tube assemblies should drop into the fitting body prior to make up.

4. No bite

If all of the above checks have been made and the sleeve still shows no sign of biting the tube, it may be that the tube is too hard.

Presetting Jig

BJ

When assembling Bite type fitting in close corner or in cabinet it may be advantageous to use this jig. It allows presetting sleeve on to the tube in a more open or safe area. After using this jig, follow the reassembly instruction.

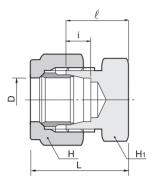

Tubing may occasionally stick in the jig after pull-up. When this happens, loosen the tube by gently rocking back and forth. Do not rock up and down or turn the tube as this may damage sealing surfaces of fitting.
