1. Warranty

The warranty period for the product is 12 months or 5 million operations (whichever comes first), but it does not include any of the following causes of failure:

- ◎ Beyond the operation method, operating environment and storage specifications defined in the product manual.
- ◎ The damage caused by installation place movement, change of working environment, or improper transfer after being installed by a professional installer.
- ◎ Product damaged due to collision or accident caused by improper operation or installation.

The following conditions are not covered by the warranty:

- ◎ Product serial number or date of production(month and year) cannot be verified.
- ◎ Gripper body and control components using non-HIWIN original products.
- ◎ Adding or removing any element into/out the gripper or the controller.
- ◎ Modifying the wire or the cables between the gripper body and the controller.
- ◎ Any modification of the appearance of the gripper or controller; Removal of the components inside the gripper or the controller. e.g., demolition of the outer covering, product drilling or cutting.
- ◎ Damage caused by any natural disaster. i.e., fire, earthquake, tsunami, lightning, windstorms, floods etc.

HIWIN does not provide any warranty or compensation to all the damage caused by above-mentioned circumstances unless the user can prove that the product is defective.

For more information towards warranty terms and conditions, please contact the technician or the dealer who you purchased with.

	Total height	mm	88	100
Total thickness	mm	38	100	

[Note 1] This gripping force is measured at a gripping point (L) of 20mm with a gripping force accuracy of ±25%.

[Note 2] This gripping force is measured at a gripping point (L) of 20mm with a gripping force accuracy of ±30%.

[Note 3] Moving velocity is 45mm/s.

[Description 1] Gripping force is recommended to be 10 to 20 times the weight of gripped object.

[Description 2] High-speed movement or rotation after gripping requires the weight of object to be reduced.

[Description 3] Material, shape, grip area, etc. of gripping part will affect the maximum weight of gripped object, and the gripping part required to be installed before gripping.

2.2 Electric gripper X-series

Model		XEG-16	XEG-32	XEG-64	
Electric gripper	Stroke [both sides](mm)	16 ±0.5	32 ±0.5	64 ±0.5

	Power Supply (V)	DC 24 ± 10%			
	Total Current (A)	0.5A			
	Weight (Kg)	0.15			

[Note 1] The weight of workpiece(kg) * acceleration of gravity 9.81(m/s²) should be 1/10~1/20 of the gripping force(N). If the gripper holding a workpiece moves or turns with high-acceleration/ deceleration, choose the model with higher force allowance.

[Note 2] Set the parameters and operation mode to avoid application of excessive impact force to the attachments (fingers) during operation.

[Note 3] Apply proper amount of grease to the grease hole of single axis robot by a grease supply device or on the surface of ball screws with brushes.

[Note 4] Mass of a workpiece that the attachments (fingers) can grip greatly differs depending on the material quality, shape, and gripping surface condition of the attachments (fingers). Design the attachments (fingers) to be lightweight and minimum length.

[Note 5] The gripping force of the specification sheet is measured at a speed of 2mm/s and a gripping point (L) of 20mm. The accuracy of the maximum gripping force is XEG-16 : ±30% · XEG-32 : ±16.6% · XEG-64 : ±13.3%.

3.4 Installing URCap

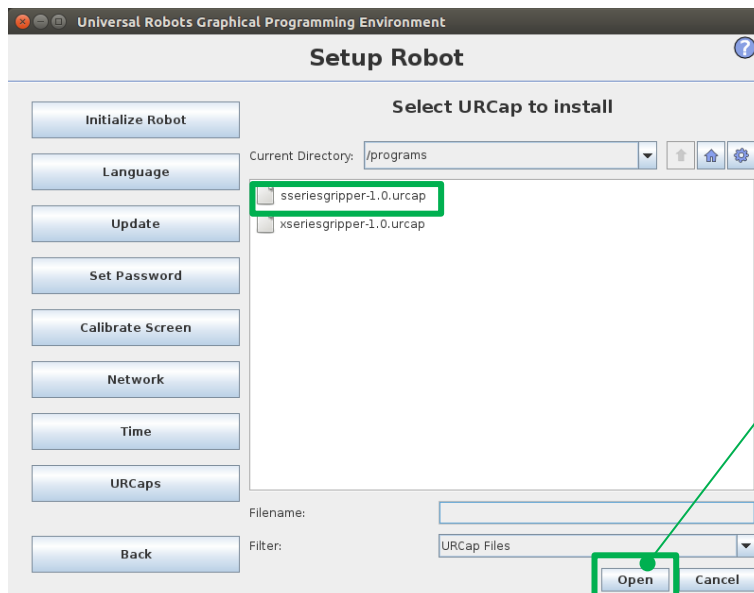

1. Click [here](#) for free downloading of URCap, and save it to a USB stick.
2. Insert the USB with the URCaps file into the UR teach pendant. From the main menu, please select “Setup Robot”.
3. Click “+” on the button side of page to open the URCap file.
4. Restart the robot when prompted.

Note : The HIWIN URCaps requires Universal Robots Polyscope software version above 3.3 or higher, and lower version may not function properly. The current URCaps only limited to UR3, UR5, UR10, CB3.0 and CB3.1.

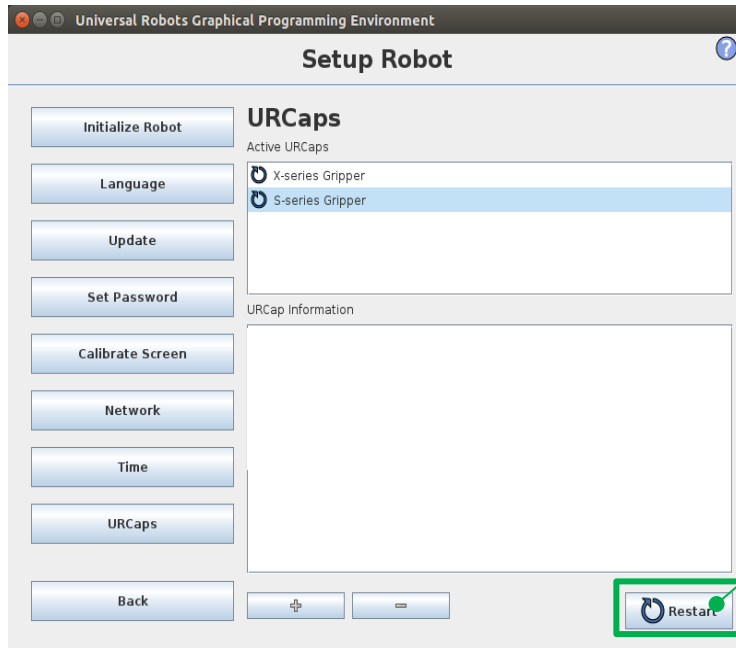

5. After successfully installing the URCaps, please follow the instruction to initialize UR Robot.
6. Set the voltage of the tool output to 24V under IO page.

3.5 Installation page

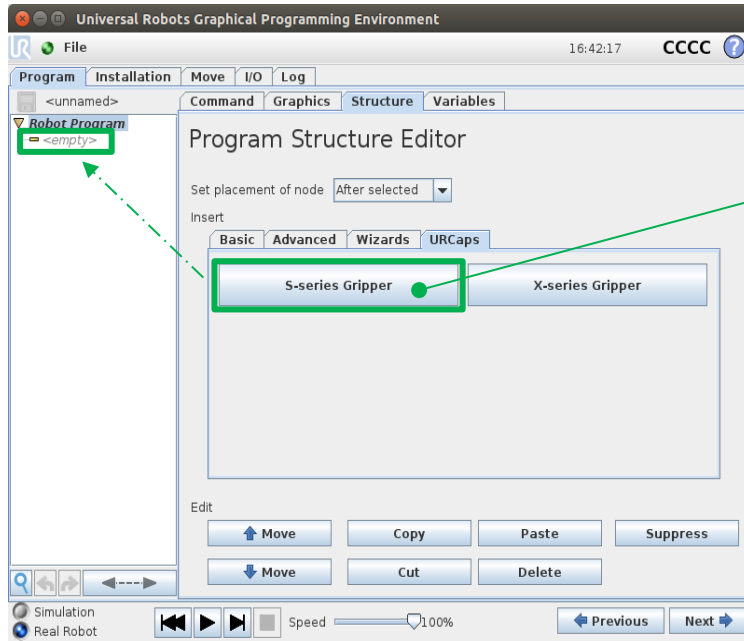

1. Click the “Ready On” to initialize the center point of gripper under installation page.
2. To make sure the gripper function well before programming, please click “> <” and “< >” shape button to manually move gripper.

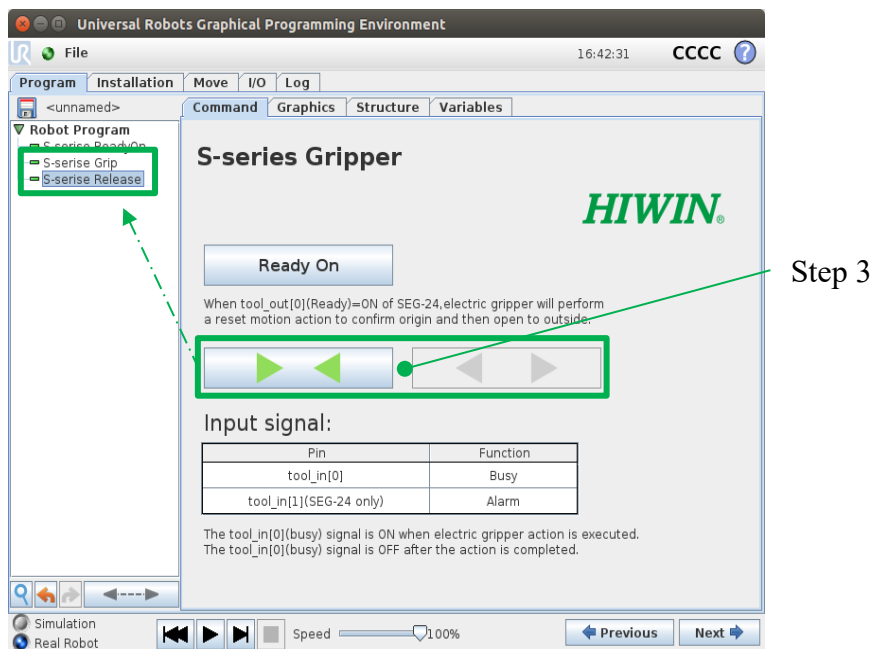

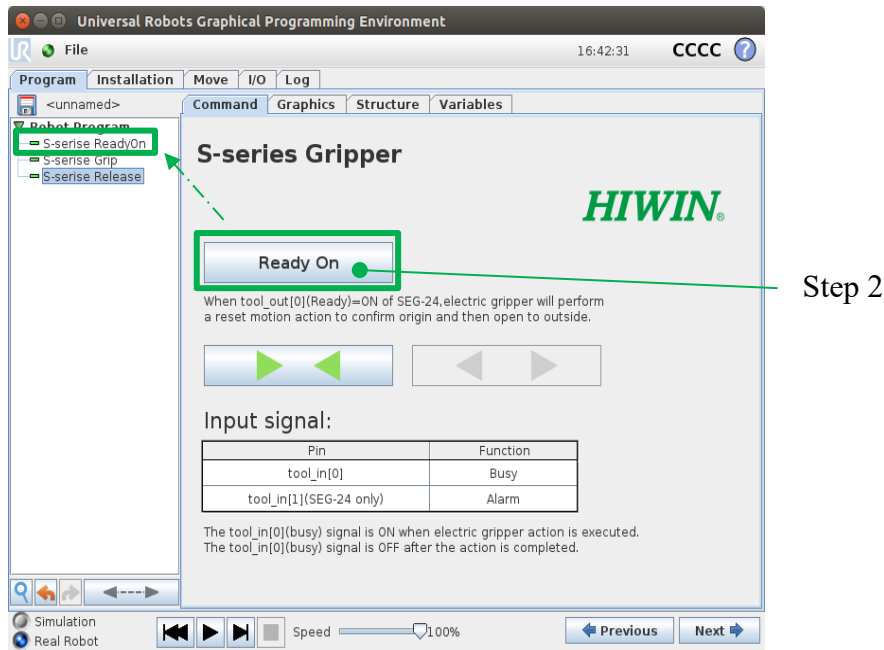

3.6 Program page

1. Please go to Program→Structure→URCaps to insert “S-series Gripper” under robot program. Undefined function will be labeled as yellow.
2. Set “Ready On” to confirm the central point of gripper. Normally, it happen when the first time supply the power.
3. Set grip and release stroke through “> <” and “< >” shape button.

gripper

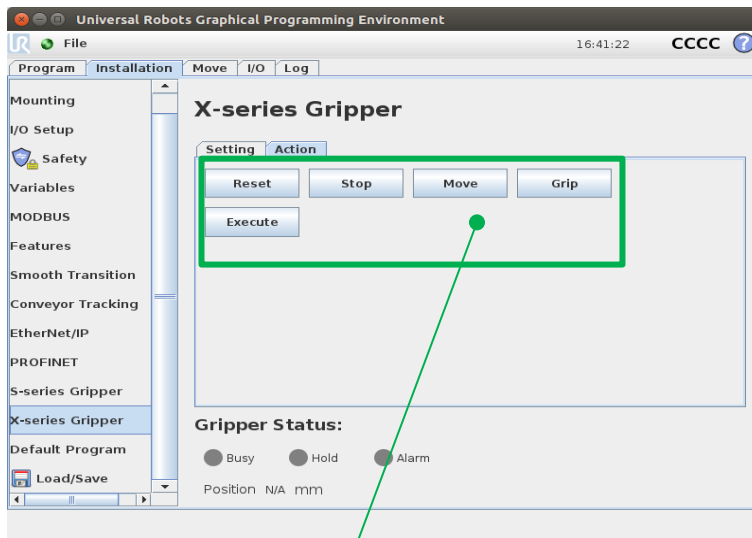

Busy : The busy signal happens when gripper is executing the program.

Hold : When the gripper exactly grips the gripped part, then the hold signal will show up.

Alarm : The alarm signal happens when error shows up during gripper operation.

Position : Gripper absolute position.

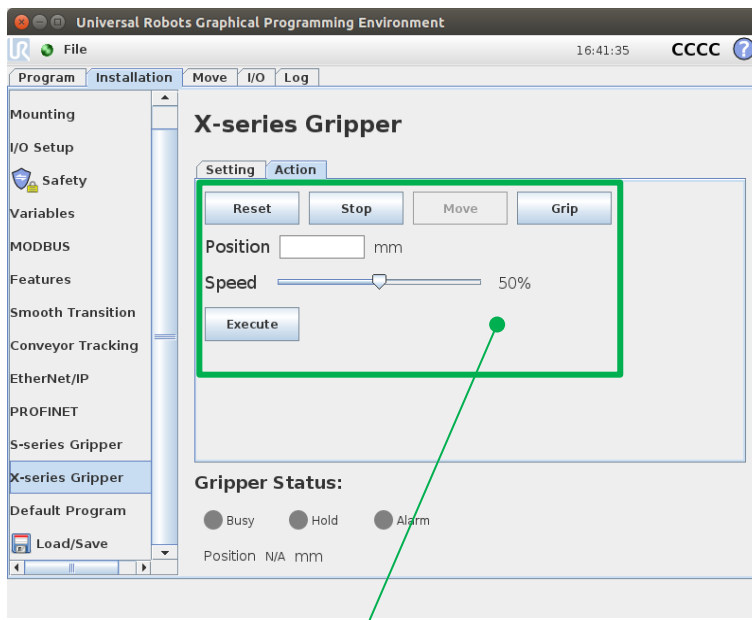

Reset : Initializing the center point of gripper.

Stop : Manually stop for any function.

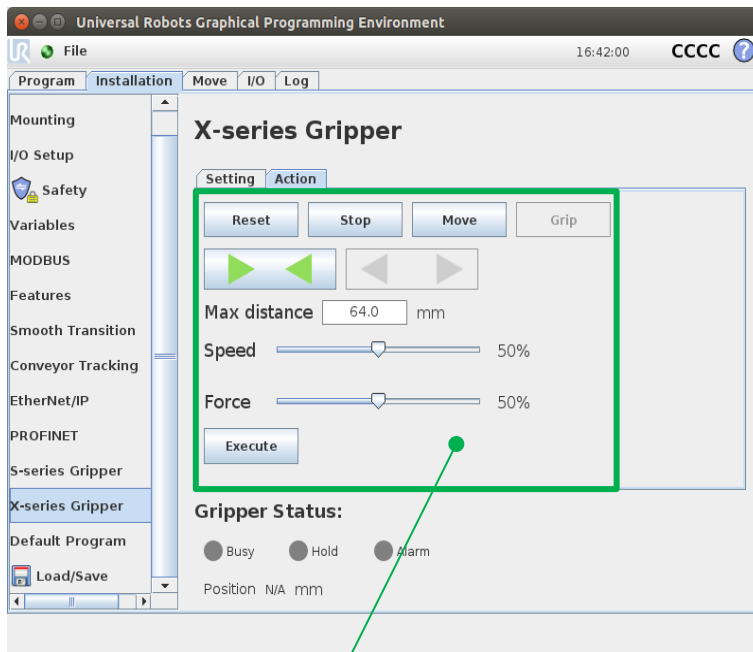

Move : Manually move gripper in an absolute position.

Grip : Manually move gripper in a relative position. When the gripper exactly grips the gripped part, then the hold signal will show up.

Execute : Manually execute above function after clicking, and each time can only run one movement.

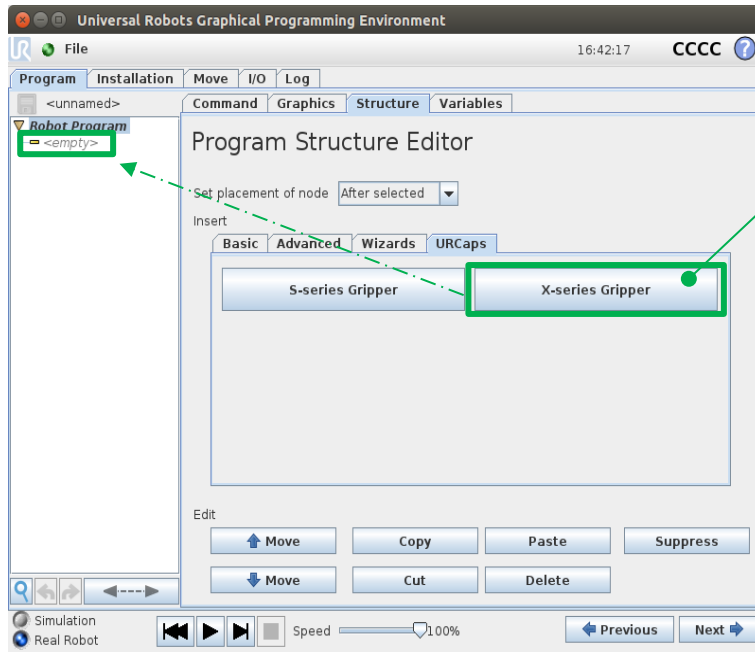

Set position and speed according to actual application, and then manually execute the gripper.

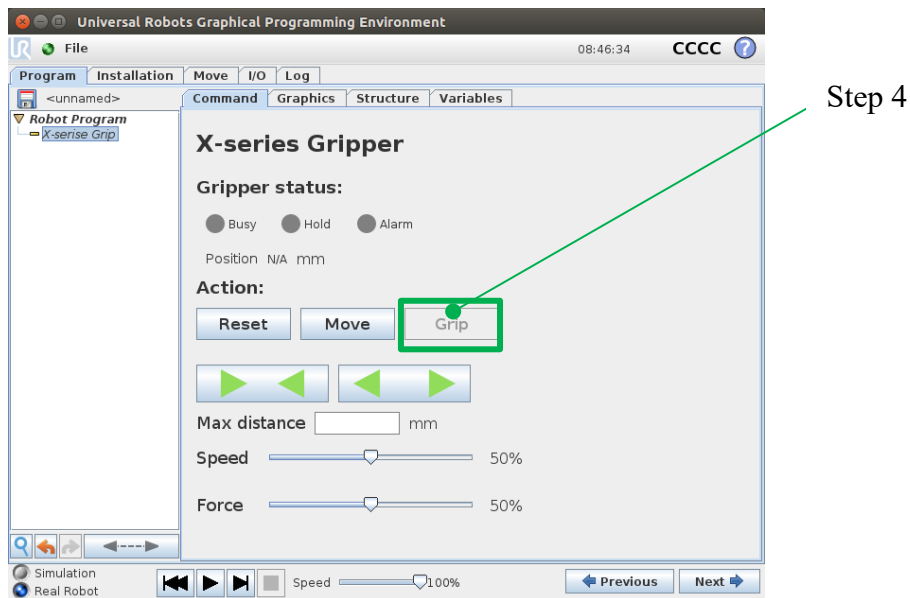

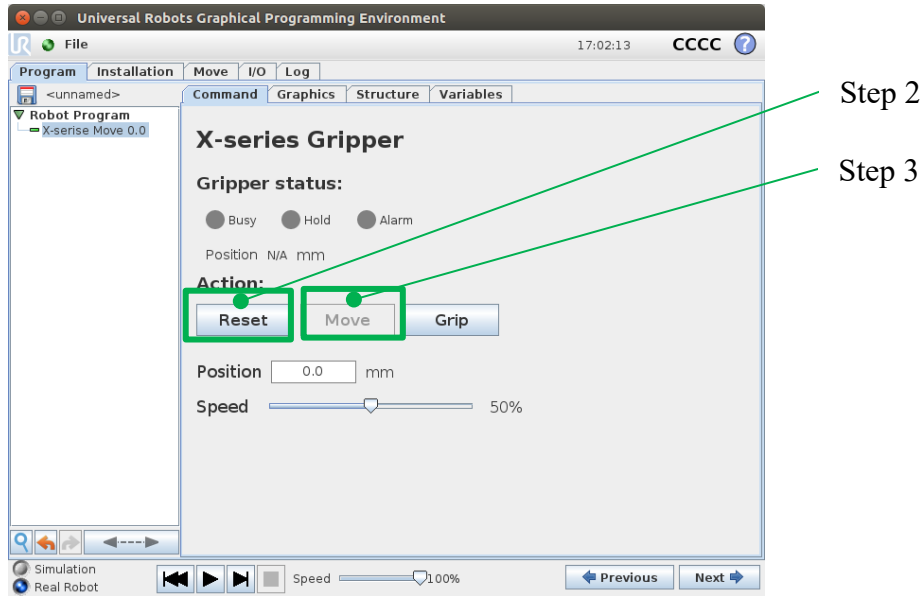

Set distance, speed and force according to actual application, and then manually execute the gripper.

Appendix.1 : Example program

To set up the HIWIN Electric gripper with Universal Robot, a quick example is provided as below.

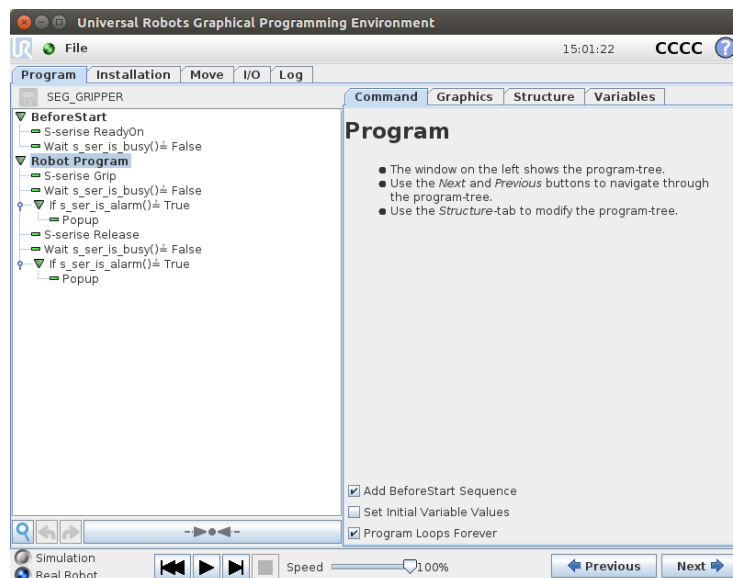

Universal Robot model : UR5 with CB3.0

Software version : Polyscope version above 3.3

URCap version: URCap 1.0

Gripper type : SEG24

1. S-series ReadyOn → Initialize the center point of gripper under installation page. Normally, it happens when the first time supply the power. Therefore, we put it before executing the main program.
2. Wait s_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
3. S-series Grip → Set grip stroke according to the actual application.
4. Wait s_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
5. If s_ser_is_alam → Popup an alarm warning when there is a one.
6. S-series Release → Set release stroke according to the actual application.
7. Wait s_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
8. If s_ser_is_alam → Popup an alarm warning when there is a one.

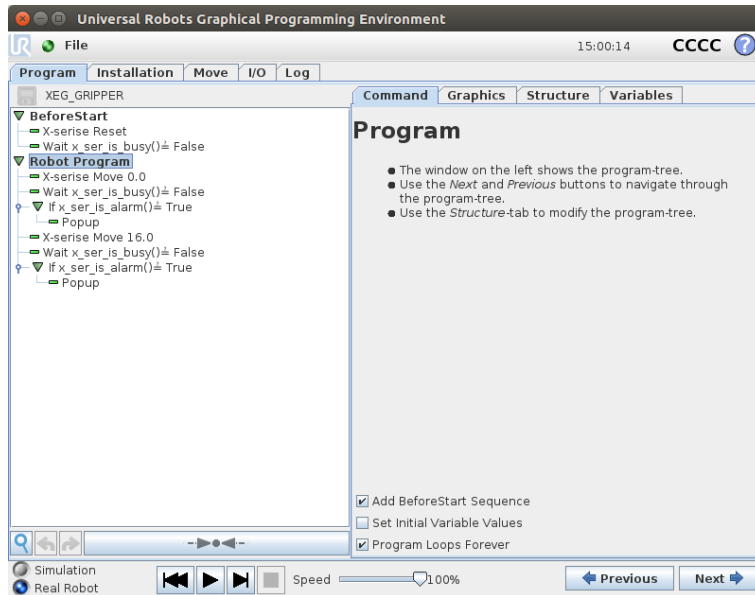

Universal Robot model : UR5 with CB3.0

Software version : Polyscope version above 3.3

URCap version: URCap 1.0

Gripper type : XEG16

1. X-series Reset → Initialize the center point of gripper under installation page.
Normally, it happens when the first time supply the power. Therefore, we put it before executing the main program.
2. Wait x_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
2. X-series Grip → Set grip stroke according to the actual application.
3. Wait x_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
4. If x_ser_is_alarm → Popup an alarm warning when there is a one.
5. X-series Release → Set release stroke according to the actual application.
6. Wait x_ser_is_busy → To make sure gripper finishes the movement, then it will run the next program line.
7. If x_ser_is_alarm → Popup an alarm warning when there is a one.
